EDUCATION

McGill University

Bachelor of Software Engineering, Co-op | **3.86 GPA**

Montreal, QC

2024 - 2028

TECHNICAL SKILLS

Programming Languages: Python, Java, C#, SQL, JavaScript, HTML/CSS, C, C++, Bash, TypeScript

Frameworks: Power Apps & Automate, Dynamics 365, .NET, Unity, Node.js, React, Pandas, Cohere, Ollama

Developer Tools: VS, VS Code, Git, Github, IntelliJ, Excel, Azure, Azure Functions, Logic Apps, Dataverse

Languages: Fluent in French and English. Limited Proficiency in Mandarin

EXPERIENCE

Software Developer Intern

Jan 2026 - August 2026

Canadian Food Inspection Agency

Montreal, QC

- Developed a **C# plugin** to parse and validate large XML files and search for related forms, leveraging REST APIs for Dataverse integration and 1:N/N:N relationship management (<15 s/file)
- Designed full-stack application features using **JavaScript**, designing forms, grids, and custom actions while integrating user interactions with processes to automate data flow and maintain data integrity.
- Collaborated with veterinarians and cross-functional stakeholders to elicit requirements, bridge domain and technical perspectives, and deliver maintainable software solutions aligned with clinical workflows.

Software Developer Intern

May 2025 - August 2025

Sinovation Ventures

Beijing, CN

- Researched advancements in robotic hand technologies and profiled high-tech firms, providing market and technical analyses that informed the investment team's early-stage strategies.
- Built a **custom AI assistant** in Python using **Ollama** to analyze user-provided documents and generate context-aware answers, enhancing research efficiency on robotic hand technologies.

PROJECTS

Online Fashion Store | Java, Spring Boot, PostgreSQL, React, TypeScript, CSS, JUnit, Gradle

[Github](#)

- Produced a full-stack online shopping application using **Java**, Spring Boot, and **PostgreSQL**, implementing REST APIs, business logic, and entity mappings for inventory, customer, cart, and order management.
- Built responsive frontend features using **React** and TypeScript, implementing dynamic user interfaces, asynchronous API integration, and real-time interactions between the frontend and backend services.
- Developed automated unit and integration tests with JUnit, achieving **95%** method coverage

Cheese Management System | Java, Cucumber, Gherkin, JUnit, Gradle, JavaFX

[Github](#)

- Developed a full-stack **Java management system** for a Comté cheese aging facility, automating the tracking of shelves, farmers, cheese wheels, and wholesale orders through an integrated application built with Umple-generated domain models, state machines, persistence, and GUI components.
- Applied behavior-driven development (BDD) practices with **Cucumber** and **Gherkin** while collaborating in a seven-member team to deliver tested features through Git/GitHub-based workflows.

NHL Stats Web Scraper and Analysis | Python, Pandas

[Github](#)

- Developed a **Python web scraper** using **Pandas** to extract, clean, and organize NHL statistics from Hockey-Reference, processing large datasets and preparing them for deeper performance analysis.
- Analyzed the scraped NHL data to uncover performance trends, generating meaningful insights into league patterns and achieving **73%** accuracy in predicting matchups through data-driven evaluation.

Chatbot | Python, Cohere, Ollama

[Github](#), [Github \(post-hack\)](#)

- Collaborated in a team of four during a hackathon to develop a **Python-based chatbot** aimed at helping users select cars, exploring various **NLP tools** and frameworks to identify an appropriate solution.
- Worked with a provided car dataset and implemented the chatbot using **Cohere**, handling user input, generating informed responses, and guiding users through exploring and selecting vehicles efficiently.
- Continued development after the hackathon by integrating **Ollama's large language models**, significantly enhancing the quality and accuracy of the chatbot's responses and recommendations.
